

## Crop Guide

# YARD LONG BEAN

### • Land Preparation

- » Narrow paths help with irrigation and drainage
- » Organic or plastic mulch may be installed to conserve soil moisture and minimize weed growth
- » Install trellis before transplanting
- » 26,600 plants/ha (adjust according to the variety and season)

ENGLISH

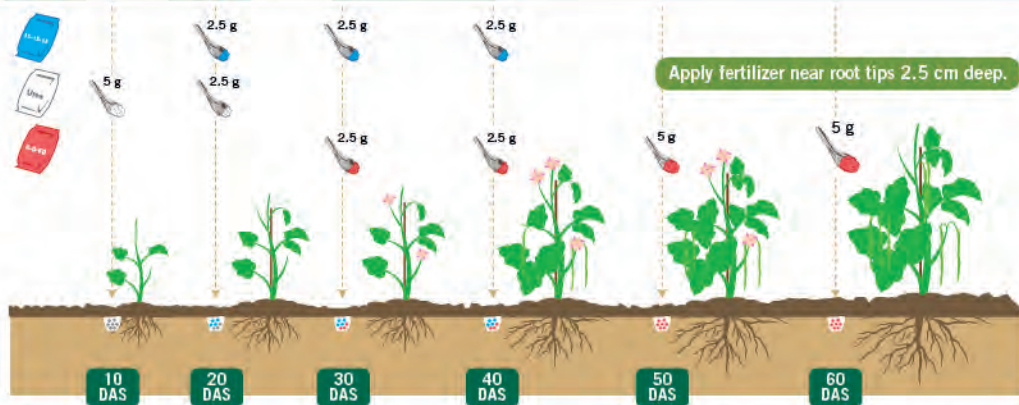

## • Sowing

» Plant 2 seeds per space and then thin to one plant when 10 cm tall

## • Fertilizer Application

Recommended amount based on crop optimum nutrient requirement and plant population of 26,600 per hectare. Adjust application according to season, soil conditions and plant growth status.

## • Integrated Pest Management

» Use sticky traps to monitor and mass trap insect pests

To prevent infection from spreading, sick plants, old crops and weeds must be removed and destroyed.

Crop rotation prevents build up of insect pests and diseases and restores soil fertility.

# • Integrated Pest Management and Safe Use of Pesticides

- » Alternate MoA groups to prevent resistance
- » Always read pesticide label and intended use (registered crop and pest)
