

# Crop Guide

## MELON

### • Land Preparation

- » Narrow paths help with irrigation and drainage
- » Organic or plastic mulch may be installed to conserve soil moisture and minimize weed growth
- » Install trellis before transplanting
- » 26,600 plants/ha (adjust according to the variety and season)

ENGLISH

# • Seedling Production

- ◆ Substrate preparation: Heat for 10 minutes or place in full sun for half a day, then fill tray

- ◆ Sow seeds and protect seedlings

- ◆ Maintain constant moisture

- ◆ Reduce water and expose to more sun 2-3 days before transplanting late in the afternoon

## • Fertilizer Application

Recommended amount based on crop optimum nutrient requirement and plant population of 26,600 per hectare. Adjust application according to season, soil conditions and plant growth status.

## • Integrated Pest Management

- » Use sticky traps to monitor and mass trap insect pests
- » Use sweet trap, basil extract trap or pheromone trap for fruit fly

To prevent infection from spreading, sick plants, old crops and weeds must be removed and destroyed.

Crop rotation prevents build up of insect pests and diseases and restores soil fertility.

# • Integrated Pest Management and Safe Use of Pesticides

- » Alternate MoA groups to prevent resistance
- » Always read pesticide label and intended use (registered crop and pest)
